

Retail360 BI — Key Findings & Analytical Insights

Derived from Qlik Sense dashboards built on Databricks Gold Layer

Data as of: 08-Jun-2026 | Records: ~100,000 transactions

1. Executive Overview

Headline Numbers

Metric	Value
Total Revenue	2.51G
Total Profit	375.5M
Profit Margin	15.0%
MoM Sales Growth	-0.17%

Key Findings

- Revenue has been **consistently flat** in the 85M–92M/month band over a rolling 3-year period, with no significant growth trajectory — MoM growth of **-0.17%** confirms stagnation.
 - Category contribution is highly balanced** — all six categories (Sessional Fruits & Vegetables 419.94M, Household Items 419.79M, Dairy Products 418.01M, Electric Appliances 418.83M, Fast Food 417.85M, Furniture 414.02M) contribute almost equally (~16.5% each), indicating no single category dominance or risk concentration.
 - Monthly Profit Trend is similarly stable (12.5M–13.7M/month), with profit margin hovering tightly around **14.7%–15.2%**.
 - Top product by revenue: **Beds-120 (467k)**, top by margin: **Refrigerators-709 (17%)**.
-

2. Sales Performance

Headline Numbers

Metric	Value
Net Sales	1.88G
Total Orders	100,000
Average Order Value	25.08k
Sales Growth %	2.1%

Key Findings

- **Rolling 12M vs Previous 12M** trend lines run nearly parallel (85M–92M range), confirming year-on-year sales growth is marginal at **2.1%**.
- **Regional contribution is near-equal:** East 25.3%, South 25.1%, North 24.9%, West 24.7% — no region is significantly outperforming or underperforming.
- **Sales and Profit by Category** shows all six categories achieving profit in the narrow 62M–62.8M band — highly uniform profitability across categories.
- **Top 5 Sub-Categories by revenue:** Mops (109.6M), Microwaves (105.8M), Carrots (107.5M), Pizzas (105.7M), Refrigerators (105.1M).
- The **Bottom 5 Sub-Categories** (visible in tab) would highlight candidates for portfolio rationalisation.

3. Profitability Analysis

Headline Numbers

Metric	Value
Total Profit	375.5M
Profit Margin %	15.0%
Avg Profit per Order	3.76k
Loss Making Orders	0

Key Findings

- **Zero loss-making orders** across 100k transactions — strong pricing discipline and discount controls are working effectively.
- Profit margin fluctuates in a tight **14.7%-15.2% band** over the rolling 12 months, indicating very consistent cost management.
- **Regional profitability is nearly identical:** East 95.15M (15%), North 93.1M (14.9%), South 94.22M (15%), West 93.06M (15%) — no region shows structural profit disadvantage.
- **Profitability Exception Report** shows all sub-categories flagged as **Healthy** — no exception items requiring intervention.
- Dairy Products and Electric Appliances sub-categories individually contribute ~4.1%-4.3% each to total profit, consistent with their equal revenue share.
- Discount average of **25.1%** (seen in Operations sheet) is generating zero loss orders, suggesting the current discount ceiling is appropriately calibrated.

4. Customer Insights

Headline Numbers

Metric	Value
Active Customers	100,000
Revenue per Customer	18.78k
Profit per Customer	3.76k
Most Profitable Segment	CONSUMER

Key Findings

- **CONSUMER segment dominates revenue** at ~1.88G (Total Sales), significantly ahead of CORPORATE (~1.26G) and HOME OFFICE (~1.25G). CONSUMER is both the largest and most profitable segment.
- **Outlet Type Performance** is nearly equal: Large (841.02M), Medium (840.95M), Small (826.47M) — suggesting uniform distribution strategy across outlet sizes.
- **Customer Acquisition Trend** shows a steep drop from ~3.5k/month in 2019 to ~216 in Jan-2024, which is likely a data recency artefact (most recent month is incomplete) rather than true churn.

- Historical acquisition rate has been **stable at 3.3k-3.7k customers/month** over 2019–2023, indicating consistent customer intake.
 - **Customer Scorecard** shows individual customers achieving 30% profit margin consistently — suggesting the 15% overall margin reflects discounting, not individual customer-level unprofitability.
 - Profit margin at customer level (30%) is double the portfolio margin (15%), implying **bulk discounting at order level** is the primary margin compression driver.
-

5. Inventory & Operations

Headline Numbers

Metric	Value
Total Orders	100,000
Avg Shipping Days	4
Average Discount %	25.1%
SLA Compliance %	71.5% (SLA = 5 days)

Key Findings

- **SLA Compliance at 71.5%** (ships within 5 days) means ~28,500 orders breach the SLA — a significant operational gap worth investigating.
- **Ship Mode Performance:** First Class and Same Day achieve ~4 avg shipping days; Standard Class performs at 4 days as well, suggesting Standard Class is performing closer to premium modes.
- **Rolling 12M Shipping Days** shows a declining trend from 5.13 days (Jan-2024) to ~3.99 days — operational efficiency is **improving over the recent 12 months**.
- **Shipping Days by Region:** East (4.02) is the slowest; West (3.97) is the fastest — differences are marginal but East warrants monitoring.
- **Discount vs Profit scatter (by category)** shows all categories clustered in the 0.25–0.253 avg discount range with profit between 61M–63M — discount strategy is uniform across categories with no outlier category being over-discounted.
- **Regional Fulfillment Scorecard:** Delhi (East) leads with 2,534 orders at 72.2% SLA, Maharashtra shows 71.3%–71.1% across multiple entries — state-level variation in SLA compliance is minimal.

6. Cross-Sheet Observations

Observation	Implication
All KPIs stable, zero losses	Business is healthy but growth is plateaued
Equal regional/category contribution	No geographic or product risk concentration
71.5% SLA compliance	~28.5k orders need logistics intervention
25.1% discount with zero losses	Discount ceiling is well-managed; room to test reduction
Customer-level margin 30% vs portfolio 15%	Bulk/volume discounting compresses margins — targeted pricing could improve
Flat MoM growth -0.17%	Organic growth needs new levers: new regions, product expansion, or customer acquisition push

7. Recommended Next Steps

1. **SLA deep-dive** — Drill into the ~28.5k non-compliant orders by region, ship mode, and product category to identify root cause of the 28.5% SLA breach rate.
2. **Discount optimisation** — With zero loss orders at 25.1% avg discount, model the profit impact of reducing discount by 2–3% for top-revenue segments.
3. **Customer reactivation** — The acquisition trend data shows stable intake; analyse whether any vintage cohorts show higher churn to prioritise retention.
4. **East region shipping** — East's 4.02 avg shipping days vs West's 3.97 is a small gap but combined with SLA data could identify warehouse or carrier inefficiencies.
5. **Growth strategy input** — Flat 2.1% growth with equal category/region distribution suggests the business needs a portfolio expansion decision rather than operational tweaks.
